

DIRECTIONS TO BUILD LIVE BARREL TRAP WITH SNARE SHOP KIT.

1. MATERIALS NEEDED.

- A. Electric drill and 1/4" bit.
- B. 7/16" and 1/2" wrenches
- C. A torch, welder or metal cutter to cut out the door opening.

2. MOUNTING DOOR FRAME.

A. Door frame must be flat against the surface of the barrel with overhead room for the door. To flatten an area the width of the door frame, cut notches about 2" apart in lip of barrel then use a hammer to bend the lip of the bucket outward.

B. Place door frame on the barrel and outline the area inside the door frame with a felt tip pen. Cut out this door opening area with a torch, welder or metal cutter.

C. Place door frame over opening. Drill the three attachment holes and bolt door frame over the door opening.

3. TRIP PAN ASSEMBLY.

A. Fasten the 8" x 5/16" trip pan bolt/bait cage to the trip pan as shown.

4. ATTACH TRIGGER ROD TO TRIP PAN BOLT.

Place the end of the Trigger Rod on the top of the Trip Pan bolt as shown. Screw a nut on the top of the Trigger Pan Bolt until it is flush with the top of the bolt. The top of the bolt is marked so the top nut will self tighten.

5. TRIP PAN INSTALLATION.

Place the trip pan on the bottom rear of barrel. Mark the position of the holes and drill a 1/4" hole at each mark.
